Press Release

EchoFlex founder acknowledged as “Top in Technology”

Squamish, BC. - May 25, 2009

Brian Aikens, Echoflex founder and Chief Technology Officer, has been awarded the “Top in Technology” award from the Applied Science Technologists & Technicians of British Columbia (ASTT).

The award is new for ASTT and is a part of their career awareness initiative. The new award rewards a technology professional who has demonstrated qualifications consistent with the high expectations of a BC professional committed to serving the public and acting as a role model to other British Columbians.

Brian began his technology career in 1979 getting involved in controlling light early on at the particle level with the TRIUMF cyclotron at the University of BC. Controlling light became a major focus with Brian as his career led him to Douglas Lighting Controls where he headed up the Engineering Department for 12 years.

Brian began Echoflex Solutions with his close friend, Shawn Pederson in 2005 pioneering product development on a “clean and green” wireless technology named EnOcean.

Throughout his career, Brian has mentored and coached many young engineers, provided work experience for university and college grads plus sponsoring many school projects. Brian’s enthusiasm has also been enjoyed by his community where he is active with youth groups and participates in many outdoor activities.

About Echoflex Solutions, Inc.

Echoflex provides sustainable control solutions for today's commercial facilities through innovative wireless technology that is self powered from the surrounding environment. Echoflex products are based on EnOcean wireless technology. EnOcean radios require very little power allowing ambient energy to power the sensors eliminating the maintenance burden of replacing batteries and disposing of them. Echoflex develops solutions based exclusively on this revolutionary technology and is leading the way in North America for product development.
